Falls Prevention – Strength and Balance Exercises

Staying physically active is the single most important thing we can do to remain fit and independent.

- As we grow older we lose muscle strength and our sense of balance. This can lead to a fall.
- To reduce the risk of falling it is important to keep our muscles strong and our sense of balance sharp.
- The more active we remain, the less likely we are to be hospitalized because of a fall.
- Research shows that any exercise, at any age, is worth the effort.

What you can do

- Be involved in an exercise program in a group or in your own home.
- Activities which are good for improving balance and flexibility include Tai Chi, dancing, gym sessions, lawn bowls, pilates, and yoga.
- If you are in any doubt about exercises, please talk to your doctor.
- To find an exercise program in your local area go to www.activeandhealthy.nsw.gov.au.
- Ask a physiotherapist or an exercise physiologist to design a suitable exercise program for you.
