DOCUMENT PURPOSE

The Clinical Excellence Commission’s (CEC) Newborn Antibiotic Guideline for early and late onset sepsis during birth episode of care aims to guide the prescription and timely administration of antibiotics for newborns during the birth episode of care.

Definitions of sepsis

SEPSIS - Early onset

Early-onset sepsis < 72 hours of age is associated with acquisition of microorganisms from the mother. Most common microorganisms associated with early-onset infection include the following:

- Group B Streptococcus (GBS)
- *Escherichia coli*
- *Haemophilus influenzae*
- *Listeria monocytogenes*
- Herpes simplex virus

SEPSIS - Late onset

Late-onset sepsis occurs ≥ 72 hours of age and may also be acquired from the caregiving environment. Organisms that have been implicated in causing late-onset sepsis include the following:

- Group B Streptococcus
- *Escherichia coli*
- *Staphylococcus aureus*
- Other gram negative organisms
- Herpes simplex virus
- Coagulase-negative staphylococci
This guideline is not intended for:

- Neonates who present to an Emergency Department after birth → use *Paediatric Antibiotic Guideline for Severe Sepsis and Septic Shock and Unwell Neonates*

- Premature neonates being managed in specialised Neonatal Intensive Care Units (NICUs) with locally-endorsed antibiotic guidelines

- Paediatric patients (29 days – 16 years of age) → use *Paediatric Antibiotic Guideline for Severe Sepsis & Septic Shock and Unwell Neonates*
IMPORTANT POINTS TO CONSIDER WHEN USING THIS GUIDELINE

- The selection of appropriate antibiotic therapy is complex - this guideline is not intended to cover all possible scenarios

- Prompt administration of antibiotics and resuscitation fluids is vital in the management of the newborn with sepsis. In newborns diagnosed with early or late onset of sepsis, the goal is to commence antibiotic therapy within the first hour

- Obtain at least one set of blood cultures and other clinical specimens (e.g. urine, cerebrospinal fluid, wound swabs) as appropriate PRIOR TO antibiotic commencement where possible - do not delay antibiotic administration if a blood culture cannot be obtained or to wait for results of investigations

- If agents listed here are not available in your hospital, consult the Attending Medical Officer and seek expert advice

- Newborn patients must be bare weighed to ensure correct calculation of medication dosing – birth weight is to be used for calculation of medication dosing until the newborn crosses birth weight

- Clinicians must document the indication, drug name, dose, route of administration and review date for antibiotics in the newborn’s health care record

- The neonate and antibiotic treatment within 24 and 48 hours or once microbiology results are available and antibiotics continued, changed or ceased as required. Where necessary, discuss with the Paediatrician, Neonatologist or Clinical Microbiologist
NEWBORN ANTIBIOTIC GUIDELINE FOR EARLY AND LATE ONSET SEPSIS DURING BIRTH EPISODE OF CARE

DECISION TREE

Newborn meets sepsis pathway criteria

Episode of care associated with birth

Newborn < 72 hours old

Refer to EARLY onset sepsis on page 8

Newborn ≥ 72 hours old

Refer to LATE onset sepsis on page 9

Further management:
The newborn with presumed or suspected sepsis must be discussed with a consultant Paediatrician or Neonatologist. If a specialist is not available, call NETS NSW phone 1300 36 2500 for urgent advice.

The newborn must be reviewed by the Attending Medical Officer within 24 - 48 hours of commencing the sepsis pathway and antibiotic therapy, with referral to the infectious diseases and/or clinical microbiology service for specific advice if required. The management plan should be communicated to the Senior Medical Officer, Midwife/Nurse in Charge, and the newborn’s family/carers.

Clinicians who are experiencing difficulty in interpreting microbiology results when rationalising antibiotic therapy should contact the designated infectious diseases and/or clinical microbiology service.
### INDICATION: EARLY ONSET SEPSIS ASSOCIATED WITH BIRTH (< 72 hours old)

### Indication: Late Onset Sepsis Associated with Birth (≥72 hours old)

**Route of Administration**

<table>
<thead>
<tr>
<th>Intravenous (IV)</th>
<th>Intramuscular (IM) Should only be used in the short term until IV access established</th>
</tr>
</thead>
</table>
| flucloxacillin 50 mg/kg  
0-7 days old, 12-hourly  
8-28 days old, 8-hourly | flucloxacillin 50 mg/kg  
0-7 days old, 12-hourly  
8-28 days old, 8-hourly |
| **Plus** | **Plus** |
| gentamicin 5 mg/kg, daily | gentamicin 5 mg/kg, daily |

*If newborn has suspected or known meningitis*

**Replace** flucloxacillin with:

- ampicillin 50 mg/kg  
0-7 days old, 12-hourly  
8-28 days old, 6-hourly

**Plus**

- cefotaxime 50 mg/kg  
0-7 days old, 8-hourly  
8-28 days old, 6-hourly

**Plus**

- gentamicin 5 mg/kg, daily [Note 1]

*If Herpes simplex infection is known or suspected*

**Add** aciclovir 20 mg/kg, 8-hourly

*If MRSA is known or suspected*

**Add** vancomycin 15 mg/kg (maximum single dose, 90 mg)  
0-7 days old, 12-hourly  
8-28 days old, 8-hourly

**If abdominal sepsis is known or suspected**

**Add** metronidazole 15 mg/kg as a loading dose then subsequent doses of:  
7.5 mg/kg 0-7 days old, 8-hourly  
7.5 mg/kg 8-28 days old, 6-hourly

**MEDICATION ADMINISTRATION TABLE**  Adapted with permission from Neonatal Medicines Formulary Consensus Group

- From a microbiological perspective, injectable medication **must be prepared immediately prior to administration** using aseptic technique
- Reconstitute antibiotics with sterile water for injection unless stated otherwise in the table below
- Displacement volume is the volume that the powder component of a drug takes up upon reconstitution. It needs to be added to the diluent volume to ensure accuracy when calculating doses that are less than a full vial. Thus the diluent volume recommended in the Product Information (PI) may sometimes differ from the volume recommended in this guideline. The displacement volume provided is an estimate and this may vary between brands. Please check in the Product Information or with the manufacturer.
